DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1-23 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding claims 1, 8, 15, the phrase "type" renders the claim indefinite because it is unclear whether the limitation(s) following the phrase are part of the claimed invention. See MPEP § 2173.05(d).

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 24-30, 34-39, and 44-51 are rejected under 35 U.S.C. 102(e) as being anticipated by Lewis U.S. Patent Number 6,526,506.

Re Claims 24, 34, 44, 46, 48, and 50, fig. 2 teaches 801.11 compliant access point 54 (network device) transmitting/streaming packets of information to the Terminals

Art Unit: 2663

66 (a station) (See col. 7, lines 43 ~ col. 8, lines 1-24) wherein the 54 includes an Encryption Engine.

Re Claims 25, 35, 45, 47, 49, 51, refer to claim 25, wherein the transmitting is by a station to the and streaming is to the Terminal from the access point (a network device) over the wireless link.

Re Claims 26-28, and 36-38, refer to Claim 24.

Re Claims 29 and 39, refer to claim 24, wherein the access point has a memory
116 See fig. 2.

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 30, 40 are rejected under 35 U.S.C. 103(a) as being unpatentable over Beach et al U.S. Patent Number 6,404,722.

Re Claims 30, 40, Beach fails to explicitly teach the network link is Gigabit Ethernet Link. Examiner takes official notice that Gigabit Ethernet links are well known standard and available to one ordinary skilled for implementation. One skilled in the art would have been motivated to modify the Ethernet link in Beach with an Gigabit Ethernet link to improve throughput.

Allowable Subject Matter

7. Claims 1-23 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.
8. Claims 31-33, 41-43 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
9. The following is a statement of reasons for the indication of allowable subject matter:

In combination with Claims 24, 29, 30, 31 & 34, 35, 39, 41, prior art fails to forming a DMA request for the data element and converting the formed DMA request to first packet for transport over the network link.

10. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

U.S. Patent Number 6,298,071 teaches an multiplexer 30-2 utilizes a direct memory access (DMA) output link table to access appropriate portions of the buffer memory 30-1, and multiplexes the accessed information to form a multiplexed output stream.
